Insight and Recommendation

Revenue & Profitability: The business generated **17.6M** in Revenue with a **4.3M** Net Profit, achieving **24.6%** Net Profit Margin.
Sportswear: This is the most profitable segment, contributing **2.74M** to the bottom line.
Nutrition: Identified as the **core weakness**, currently operating at a loss of **0.71M**. The Scatter Chart confirms this segment has a negative margin and significantly lower revenue compared to others.
Primary Cost Drivers: **Labor** is the largest expense at **4.49M**, followed by **Payroll** (**1.79M**) and **Equipment** (**1.33M**).

Nutrition Turnaround: Conduct an immediate audit of the Cost of Goods Sold (COGS) and operating expenses for the Nutrition segment, as it is actively eroding total company profit. If margins do not improve by the next quarter, consider downsizing or pivoting the business model for this line.
Labor Optimization: With nearly **4.5M** spent on Labor, this should be the primary target for cost-saving initiatives. Analyze monthly trends to determine if this spike is due to overtime, over-hiring, or low productivity.
Scale Sportswear: Given its high profitability, reallocate marketing budgets and inventory resources toward this segment to maximize total Net Profit.
Leverage Consulting: Although revenue is smaller (**2.8M**), it is high-margin income. Explore "productizing" these services to be bundled with physical goods to boost the overall blended margin.
